

When interviewing a dental technician, it's important to ask questions that assess their technical skills, experience, attention to detail, problem-solving abilities, and their ability to work effectively as part of a team. Here are some interview questions you can consider:

- Can you describe your experience in dental technology, including the types of restorations and appliances you have worked on?
- What materials and equipment are you most proficient with in a dental laboratory setting, and how do you ensure quality and precision in your work?
- How do you stay updated on the latest advancements in dental technology and materials, and how have you implemented these innovations in your work?
- Can you share an example of a challenging case or project you've worked on in the past, and how did you overcome any difficulties or unexpected issues?
- In a dental laboratory, attention to detail is crucial. How do you ensure the accuracy and quality of your work, especially when working on complex restorations?
- Dental technicians often collaborate with other team members. Can you describe your experience working as part of a dental team and your approach to effective communication within the team?
- How do you manage your workflow and prioritize tasks to meet deadlines in a dental laboratory setting, especially when there is a high volume of work?
- Quality control is essential in dental technology. Can you explain your approach to quality control and your methods for identifying and rectifying any errors in your work?
- Dental technicians often receive prescriptions and instructions from dentists. How do you ensure that you understand and follow these instructions accurately?
- Can you discuss any experience you have with digital dentistry and computer-aided design and manufacturing (CAD/CAM) systems?
- Safety and infection control are paramount in a dental laboratory. How do you ensure a safe and clean work environment, and how do you stay up-to-date on relevant regulations and guidelines?
- Describe a situation where you had to troubleshoot or find a creative solution to a technical problem in your work. How did you handle it?
-

- How do you handle feedback and criticism from peers or supervisors, and how do you use it to improve your skills and performance?
- Can you provide examples of any certifications or additional training you have completed to enhance your expertise as a dental technician?
- Why do you want to work at our dental laboratory, and how do you see yourself contributing to our team and its goals?
- These questions should help you assess the candidate's technical skills, problem-solving abilities, work ethic, and their fit with your dental laboratory's needs and culture. Additionally, you may want to include questions specific to the type of dental technology and equipment used in your laboratory.
