1. One of the biggest concerns patients have is that they are not able to fully understand or visualize what the clinician is proposing.
   a. True  
   b. False

2. Today’s proactive labs can help their customers achieve better patient acceptance with a very innovative software from PreVu Dental.
   a. True  
   b. False

3. Prevu Dental’s technology now allows the team to create life-like visual simulations to assist with the treatment plans. It is a true diagnostic tool.
   a. True  
   b. False

4. After evaluation of the simulations, Esther decided the midline discrepancy would bother her and chose the more aggressive option.
   a. True  
   b. False

5. The patient’s posterior teeth posed an equally esthetic and functional challenge.
   a. True  
   b. False

6. When the team realized there was an obvious lack of bone and no adequate healthy abutment teeth. The decision was made to restore the lower arch with a traditional removable partial.
   a. True  
   b. False

7. The team agreed on the importance of #9 as an abutment tooth because there would be no esthetic challenge.
   a. True  
   b. False

8. One of the advantages the 3Shape design software offers is the ability to show the pre-op and wax-up in the same design file.
   a. True  
   b. False

9. Up to this point, most PMMA material has had clearance by the FDA for up to five years of intra oral use.
   a. True  
   b. False

10. This comprehensive digital workflow truly assists today’s technicians in minimizing design mistakes. It also assists in the task of satisfying a patient’s expectations, even in an extremely complex case like this.
    a. True  
    b. False
